As soon as the troops reach the area of operation abroad they can continue to maintain their shooting skills, zeroing their weapons etc. The shooting distances can vary from 25 metres and up to whatever distance the user may desire.

The electronic targets with individual monitors give an immediate feedback to the soldiers and the instructors. The results can easily be stored and printed out.
Capacity:
- 2 targets in each 10 ft container
- 4 targets in each 20 ft container
- 8 targets in each 40 ft container

The following equipment is permanently mounted in the Target Container:
- Armour grade steel and rubber granular panels in front of the container.
  - This protection is mounted to avoid damages and ricochets from projectiles.
- Electronic targets (130 x 130 cm wide)
- Radio or wire communication between the target- and the Firing Container.
- Battery, generator or mains power
- Bullet trap

Bullet traps with granulate, specification:
- For all standard handgun and machine gun calibres up to, but exclusive .50 cal
- Can withstand at least 10,000 rounds per target before service is needed
- All components are recyclable
- Bullet traps can be made to fit larger calibres upon request.

FIRING CONTAINER

Capacity:
- 2 shooters in each 10 ft container
- 4 shooters in each 20 ft container
- 8 shooters in each 40 ft container

The following equipment is permanently mounted in the Firing Container:
- Monitors for each shooter, specification:
  - The display is readable in bright sunlight
  - Able to withstand the impact of cartridges from automatic weapons
  - Can be operated in rough conditions (-40 to + 70 degrees Celsius)
  - Mil. Spec. connectors
  - Vandal proof buttons
  - Waterproof chassis, made of stainless steel
  - Smart card reader to identify the shooters
  - Target Software available for a vast variety of standard target templates
  - Software for new templates can easily be made

System specification:
- Radio or wire communication to the Target Container
- Control Room Software makes it easy to print and store the results
- Spectator Display Software helps the instructors to identify the shooters who need assistance
- Battery, generator or mains power
- Bullet trap

Bullet traps with granulate, specification:
- For all standard handgun and machine gun calibres up to, but exclusive .50 cal
- Can withstand at least 10,000 rounds per target before service is needed
- All components are recyclable
- Bullet traps can be made to fit larger calibres upon request.

All equipment is mounted permanently inside 10, 20 or 40 feet containers, which can be deployed very rapidly into the operation area by land, sea or air freighters.

The containers can easily be connected to each other, creating a larger range with more targets.

As soon as the containers are placed on the ground, the units may start shooting!

The Armed Forces do no longer need to spend time and money on shooting gallery infrastructure, which cannot be disassembled and shipped home, or reused in another operation area.

The system is also environmentally correct since no projectiles (lead etc) are left in the nature. The Target Container is designed to be bullet proof and the rubber panels make it totally ricochet free.

The containers can be customised.
